

Interview Questions: Balanced Search Trees

[Help Center](#)

The **hard deadline** for this homework is **Mon 16 Nov 2015 10:29 AM IST**.

These interview questions are for your own enrichment and are not assessed. If you click the *Submit Answers* button, you will get a hint.

☐ In accordance with the Coursera Honor Code, I (abhijit taware) certify that the answers here are my own work.

Question 1

Red-black BST with no extra memory. Describe how to save the memory for storing the color information when implementing a red-black BST.

Question 2

Document search. Design an algorithm that takes a sequence of N document words and a sequence of M query words and find the shortest interval in which the M query words appear in the document in the order given. The length of an interval is the number of words in that interval.

Question 3

Generalized queue. Design a generalized queue data type that supports all of the following operations in logarithmic time (or better) in the worst case.

- Create an empty data structure.
- Append an item to the end of the queue.
- Remove an item from the front of the queue.
- Return the i^{th} item in the queue.
- Remove the i^{th} item from the queue.

- ☐ In accordance with the Coursera Honor Code, I (abhijit taware) certify that the answers here are my own work.
